

## Handy Type Index

AMERICAN TYPE FOUNDERS

## This Handy Index

shows one-line samples of all ATF faces currently manufactured for stock. Most of them are immediately available from your authorized ATF Type Dealer. This catalog also gives information on sorts, spaces and quads, leads and slugs, etc. For quick reference, see table of contents on this page.

IT'S EASY TO ORDER any of the type faces or accessories shown. Simply indicate your requirements on an order blank, as furnished by your dealer, or, if you prefer, use your own purchase order or letterhead and mail it to your ATF type dealer. In most cases, he will make prompt shipment from his comprehensive stock.

## How to use this Handy Type Index

TO HELP YOU CHOOSE the style and quantity of the face you need, just refer to the alphabetical listing of type faces. There you will find, accompanying each sample line, all you need to know about sizes made, number of characters in the font, etc. Here is an example of one of the entries with an explanation of the designations used:

### Bernhard Gothic Medium 525

18 pt. shown

PACK MY BOX WITH FIVE DJ  
Pack my box with five dozen jug|123

6pt	26A	58a	21-1	12pt	18A	42a	11-1	24pt	7A	15a	7-1
8pt	22A	52a	17-1	14pt	15A	35a	10-1	30pt	5A	12a	5-1
10pt	21A	47a	15-1	18pt	9A	24a	8-1	36pt	5A	10a	4-1

### Name and Number of Face

The full name and face number (Bernhard Gothic Medium 525) should be stated, as in some cases several weights and widths of the same face are available.

### Alignment Position

The vertical rule in each specimen line graphically indicates the exact body size of the type. This enables you to see the placement of the face on the type body and the alignment position.

### Type Sizes

The point sizes given refer to the body size of the type. These are usually simple designations, such as 24 pt, 30 pt, etc. In some cases, different face sizes are available on the same body size, as in the Copperplate Gothics. For instance, 6 pt No. 1, 6 pt No. 2, 6 pt No. 3, etc. Sizes printed 18/24 or 120/96 should be read "18 point face on 24 pt body," or "120 point face on 96 point body."

## TABLE OF CONTENTS

Accented Letters, Spanish.....	13
Adcuts and Logotypes.....	13
Alphabetical Listing of Faces .....	3 to 11
Font Scheme Table.....	14
General Information .....	2
Matrix Engraving.....	13
Sorts.....	13
Spaces and Quads .....	12

### Contents of a Font

Fonting schemes for every size are also shown. These schemes indicate the quantity of every character contained in the font, in a correct proportion based on the frequency with which the various letters of the alphabet are used.

In our example, 6 pt Bernhard Gothic Medium shows a scheme of 26A, 58a, 21 figures 1. To determine the quantity of the other characters contained in the font, refer to the table on page 14. For the caps, simply follow down the column headed 26. Do the same with the column headed 58 and 21 on the proper "Lowercase" and "Figures" tables.

## Copper and Brass Thin Spaces

Half point Copper and one point Brass Thin Spaces are put up in ounce packages of one body size, either Copper or Brass.

Sizes available: 6, 8, 10, 12, 14, 18, 24, 30, 36, 42, 48, 60 and 72 point.

### SPACES

are non-printing types less than one em in set width. Thickness is commonly designated by the number of pieces that add up to approximately one em, as 5-to-em, 4-to-em, and 3-to-em. ATF Foundry Spaces are graduated on the point-set system to quarter points. 10 point 3-to-em Spaces are 3½ points set; 14 point 3-to-em Spaces are 5 points set. 2-to-em is called EN SPACE.

### QUADS

are cast em-set, two-em or three-em. Sizes smaller than 14 point contain all three; 14 point to 24 point do not contain three-em Quads. Larger sizes are em Quads.

## Set Widths of Spaces and Quads in Points

## Sorts of Typecast Products in Foundry Lines

All information given in this schedule applies to items in our current line as well as to inactive items.

### What is a Foundry Line?

A "Foundry Line" comprises as many type, cast from one matrix, as can be placed in a 36 pica line (see illustration above).

The cut shown has a 42 point body and a 52 point set width. One 36 pica foundry line = 432 points. Therefore, one line would contain  $432 \div 52 = 8$  type.

### Why a 36 Pica Line?

A 36 pica line is the foundry's standard production unit. Fonts too, are made up to the 36 pica measure. However, in sorts one line will contain only one kind of letter, figure or other character.

### What may be Ordered as Sorts?

Any item, active or inactive, that can be cast by normal methods and for which we have matrices in our possession.

### Delivery

Foundry lines are cast as soon as possible after the order reaches the foundry, provided matrices are available. Since sorts are always cast to special order only, immediate delivery cannot be expected. Ask your ATF type dealer for current delivery information on sorts.

**Sorry, Foundry Lines cast to order may not be returned for credit.**

## Adcuts and Logotypes

### What are they?

Company or personal signatures, trademarks, emblems, symbols, designs or similar subjects can be cast in type in hard, long-wearing, foundry-type metal. These are called adcuts. Logotypes are combinations of letters, points, figures, fractions, or words which are cast for convenience on one body. All are cast on point-system bodies (the same as fonted type), and supplied in 36-pica foundry lines. And all print better, last longer and cost less than electros! They also phase with active or inactive ATF faces where necessary.

### Preparatory Work

There is a charge for tooling and preparation on initial orders, which can be supplied by your Authorized Dealer. Tooling for more elaborate designs, intricate detail, shading, mortising, or other special treatment is subject to prior quotation by ATF.

For best service contact your ATF type dealer

# THE ANATOMY OF ATF TYPE

## A ALIGNMENT

In ATF type, alignment is built into the matrix. The base, or line, of the letter is an integral dimension of the matrix and is not left to the casting machine operator's discretion. Every letter cast from ATF matrices will align regardless of when it is cast. Casting machines not having this feature cannot constantly cast quality type. Accordingly, carelessness, lack of skill on the part of the operator, slippage or wear can all result in different adjustment and alignment on different letters or different castings.

## BODY

An efficient body must be strong. Making metal hard is a simple matter, but a metal that will withstand abrasion by paper stocks as well as the abusive pressures of printing and reproduction methods such as stereotyping, electrotyping, rubber plate molding, etc., must be more than hard. It must be tough. ATF type is tough but its toughness rests not alone in the metal formula. To produce a tightly compressed, fine grain metal the molten metal must be cast at high temperature under high pressure in a water-cooled mold. Ordinary type casting machines cannot match the high pressures or high temperatures of ATF casters and few are equipped with water-cooled molds. In conse-

quence, many competitors are unable to match the hardness of ATF type, even if they use ATF metal. By the same token, we can cast harder type from their metal than they can. Accuracy is another important requisite of the type body. If the body of a character tapers in any direction or if its four sides are out of square, this character cannot set snugly against its neighbors, is bound to produce a spongy line or form. Here, again, the heavily constructed, non-adjustable mold which characterizes ATF casters assures a degree of accuracy which others can seldom match.

## COUNTER AND DEPTH

ATF matrices are engraved—not stamped—in hard nickel brass. They are cut with precision tools which assure clean walls and sharp edges, even at maximum depths. Most matrices are stamped or punched, rather than engraved. Because of this fact they require a softer brass and there is a definite limitation on the depth to which the punches can be driven, particularly in the shaping of counters.

## FACE

The face of ATF type has three distinctive features—its design, the efficiency with which it lays ink onto paper uniformly and sharply and

its position on the body. The design of ATF faces is the combined work of the best available talent in type design and type layout, assuring not merely novel but PRACTICAL faces. Their printability comes from their sharp edged, mirror-smooth face and can be obtained only by engraving of the finest sort. The final engraving of ATF matrices is done with tools as fine as .0015 in. thickness, which provide a fine surface for casting. However, ATF goes further to obtain a super-smooth printing surface by giving each matrix a light finishing coat of chromium.

As with "alignment," the position of the face on the body is a precise dimension in the matrix itself, achieved by expert hand finishing. It is not left to the operator, hence it is identical, regardless of when the type is cast.

## FEET

The feet of ATF type are always square with the body and parallel to the face, because of the heavy construction of the mold on ATF casters and the care expended in maintaining their accuracy at all times.

## GROOVE

The groove in ATF type is machined during the casting operation. ATF casting machine operators are careful to keep their grooving knives both sharp and properly adjusted and thus avoid the burrs that make some other types more than type high or uneven on their feet.

## SET

The set of ATF type, like its "alignment," is built into the matrix and is not subject to the variations of an adjustable mold. That the set is always identical in ATF type, regardless of when it is cast, is further guaranteed by the fact that the precise dimension of each character is stamped on the matrix as a guide to the operator and the inspectors who maintain a constant check on the accuracy of the ATF product.

Good letter-spacing is normal with ATF type. Each character is fitted individually to look its best with all other letters in its alphabet. Overhanging letters set well because they are properly kerned and rubbed—a PLUS VALUE in ATF type.

## TYPE HEIGHT

The carefully controlled depth of ATF's engraved matrices, plus the equally accurate height of ATF molds, produces type of constantly uniform height. Further precaution against inaccuracy is the rigid ATF inspection which discards any type that is over .0005 in. high or low.

# ATF Types Offer You

numerous possibilities to express your message in the type best suited to the job. Specimen lines of more than 125 different faces are shown in this new index of ATF Types.

Skilled use of these types will add color and interest to any printed piece. Several of the new faces were designed to give display lines a "handlettered" look at only a fraction of the cost of made-to-order lettering!

## Best for Printing and Reproduction Proofs

As most printers know, *ATF type is the best quality foundry type available.* Because of a superior metal alloy used in a precision casting operation, it lasts longer and prints more clearly, with well defined detail. This makes it ideal not only for printing direct from the type, but also for top quality reproduction proofs. Yet ATF type costs little, particularly in the smaller sizes which many printers use only once and discard, without distribution.

## Offer Your Customers a Versatile Type Service with Only a Modest Investment

If you are thinking of adding a casting machine, particularly one for display lines, consider the advantages of far lower investment and greater flexibility of a selection of foundry type.

The wide range of styles and sizes available to you as you need them — the lower cost that makes it possible to discard old faces and add new ones as your requirements change — enable you to offer the most versatile type service with the smallest investment.

## ATF Types are Readily Available

ATF's network of type dealerships throughout the country insures immediate availability at convenient locations. In addition, a reserve stock is maintained at the foundry in Elizabeth, New Jersey.

*For quickest service, send your orders for type and foundry products to the authorized ATF Type Dealer in your area.*
